

Suspected Nevada Drug Overdose Surveillance Monthly Report

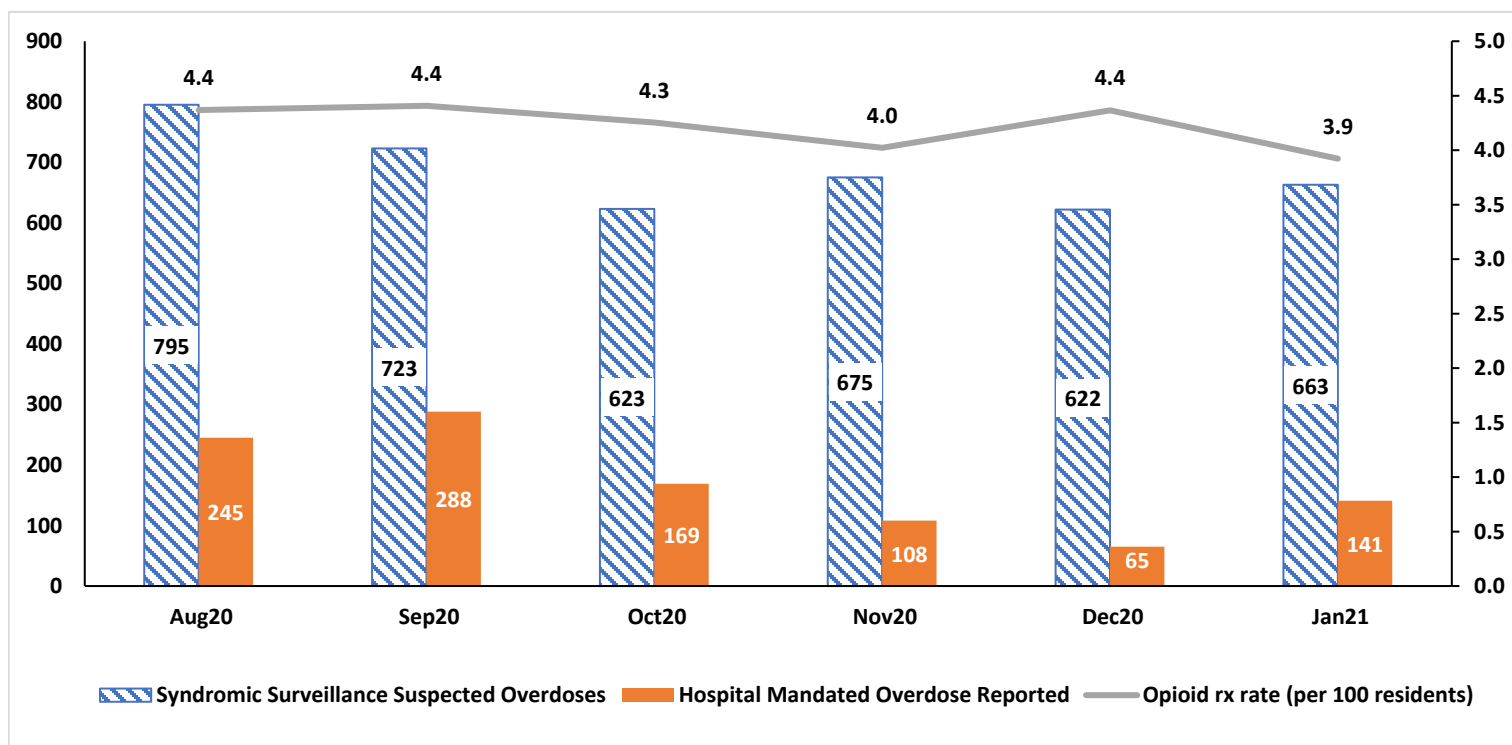

February 2021: *Statewide Report*

The Centers for Disease Control and Prevention (CDC) Overdose Data to Action (OD2A) is a program that supports state, territorial, county, and city health departments in obtaining more comprehensive and timelier data on overdose morbidity and mortality. The program is meant to enhance opioid overdose surveillance, reporting, and dissemination efforts to better inform prevention and early intervention strategies. This monthly report contains information on overdose within the state of Nevada utilizing emergency department (ED) visits data from the National Syndromic Surveillance Program, mandated reporting of drug overdoses from hospitals in Nevada (per NRS 441A.120), and data from the Prescription Drug Monitoring Program (PDMP) for the month of January 2021.

Report Highlights:

- This report now contains PDMP data: In Q4 of 2020, opioid prescriptions were dispensed at a rate of 4.2 per 100 residents in Nevada.
- Suspected drug-related ED visit rates decreased by 14% from December 2020 to January 2021.
- From December 2020 to January 2021, suspected opioid-related ED visit rates increased by 21%.
- Patients that visited the ED for drug-related concerns in January 2021 were more likely to be male, White, and between the ages of 15-34.

Figure 1. Suspected drug overdoses from Syndromic Surveillance and hospital reporting with prescription (Rx) opioid rates (per 100 residents)

Technical Notes:

Data Sources: National Syndromic Surveillance Program is a near real-time method of categorizing visits to the ED across Nevada based on a patient's chief complaint and/or discharge diagnosis. 441A overdose counts are reported by hospitals that are mandated to report suspected drug overdoses to the Chief Medical Office or other designee, per NRS 441A.120. The Prescription Drug Monitoring Program is a database of information regarding the controlled substance prescriptions that were dispensed to patients in Nevada.

Case definitions: For National Syndromic Surveillance Program, case definitions and queries for suspected all drug ED visits are created and provided by CDC and include chief complaint keywords and ICD-10-CM discharge diagnosis codes. Opioid prescriptions include any opioid analgesic controlled substance prescriptions dispensed, including schedule II, III, IV prescription opioids that are entered into the PDMP

Analysis: ED visit counts with < 10 counts for any month were not included. The opioid prescription rate for each month per 100 residents is calculated based off of the estimated annual population for all of the counties in the region based off of State Demographer estimates, so rates calculated may vary slightly compared to other reports.

Limitations: Statewide, the National Syndromic Surveillance Program is estimated to capture visits from approximately 90-95% of Nevada emergency department facilities, and thus may underestimate the occurrence of overdoses across the state. Since not everyone who overdoses is able to make it to the ED, this report may underestimate the total overdose burden in the state. The 441A overdose counts, although mandated, may not be reported by every hospital, and may underestimate the occurrence of overdoses in hospitals. PDMP data show the number of prescriptions filled to Nevada residents, and does not capture whether the medications were taken as prescribed or taken by the prescribed patient. In addition, a person can be included for more than one prescription (not mutually exclusive).

Address questions/comments to Nevada OD2A's Opioid Epidemiologist, Shawn Thomas, MPH, at shawnt@unr.edu.

I. Syndromic Surveillance:

Figure 2. Monthly rates for suspected opioid, heroin, and stimulant-related ED visits in NV (per 100,000 population)

Figure 3. Rates for suspected all drug, opioid, and heroin-related ED visits, Jan 2018-2021 (per 100,000 population)

Figure 4. Sex of suspected drug-related ED visits in NV, January 2021 (N=663)

Figure 5. Race/Ethnicity of suspected drug-related ED visits in NV, January 2021 (N=654)

Note: Other Race includes American Indian/Alaskan Native, Asian, Native Hawaiian/Other Pacific Islander, and Other Race. Race/Ethnicity is based off of PHIN flatline codes and data quality may change month to month and providers may enter more than one code, so visits were assigned the most appropriate race/ethnicity. Percentages exclude missing data.

II. Hospital Mandated Drug Overdose Reporting (per NRS 441A.120):

Figure 7. Statewide count of overdoses reported by hospitals among NV residents, 2019-2020

Note: The number of hospitals that report overdoses to Nevada Department of Health and Human Services has increased over time, so interpret differences between years with caution.
