## **ABOUT THE DIVISION OF PUBLIC AND BEHAVIORAL HEALTH**

The Division of Public and Behavioral Health (DPBH) is one of five divisions within the Department of Health and Human Services, which falls within the Executive Branch of the State of Nevada. It is the primary provider of public health services in many rural areas of the state and provides certain public health services statewide, though the majority of public health services in urban areas are provided by local health authorities. The Division also provides a wide range of behavioral health services through civil and forensic inpatient psychiatric hospitals in northern and southern Nevada, rural outpatient clinics and programs, and other critical facilities.

## **ABOUT THE LARSON INSTITUTE**

This publication was prepared by the Larson Institute for Health Impact. The Larson Institute, housed within the University of Nevada, Reno School of Public Health, translates academic research into actionable community practices that improve public health outcomes. Through community engagement and workforce development, we build public health capacity, support state systems and mobilize community partners to advance community health and well-being. Learn more by visiting us at [larsoninstitute.org](http://larsoninstitute.org). For questions about this report, please contact the Larson Institute's Data Analytics Manager, Taylor Lensch, at [tlensch@unr.edu](mailto:tlensch@unr.edu).

## **FUNDING ACKNOWLEDGEMENT**

This publication was made possible by the Overdose Data to Action Grant #NU17CE010224 awarded by the State of Nevada DHHS DPBH Bureau of Behavioral Health, Wellness and Prevention. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of the State of Nevada or the Centers for Disease Control and Prevention.

---

## PURPOSE

The Centers for Disease Control and Prevention (CDC) Overdose Data to Action (OD2A) is a program that supports state, territorial, county, and city health departments in obtaining more comprehensive data to enhance overdose surveillance, reporting, and dissemination efforts to better inform prevention, early intervention, treatment, harm reduction, and other entities. This monthly report contains information on overdose within the **Rural Region counties (Humboldt, Pershing, Lander, Eureka, Elko, and White Pine counties)** primarily utilizing emergency department (ED) visit data from the National Syndromic Surveillance Program for the month of **April 2026**.

**Actions to Help Support Overdose Prevention and Response:** Emergency departments serve as an important connection point with people and their loved ones regarding fatal and non-fatal overdose prevention. With consideration of the data outlined in this report, community partners, including emergency departments, healthcare systems, and emergency medical services may consider potential steps to further support people experiencing an overdose:

- Explore ways to include educational information as part of standard discharge paperwork for people who experience an overdose, which can include helping them identify [behavioral health treatment](#), providing [resources](#), or other relevant information.
- Expand Naloxone distribution at emergency departments and by EMS (Leave Behind Naloxone) to those who had an overdose and their family and friends.
- Provide peer support to patients and their loved ones through recovery coaching in the emergency department to ensure they are provided with wraparound services following their medical emergency.
- Provide training opportunities for emergency department staff, EMS, and other emergency responders on how to discuss overdose prevention and response with patients who may be at risk for overdose.

## REPORT HIGHLIGHTS

- Suspected drug-related overdose ED visit rates have **increased by 83%** from March 2026 to April 2026 in the Rural Region.
- Suspected drug-related overdose ED visit rates **increased by 16%** from April 2025 to April 2026 in the Rural Region.

## TREND DATA

Figure 1. Suspected drug overdoses from Syndromic Surveillance in the Rural Region, past 12 months

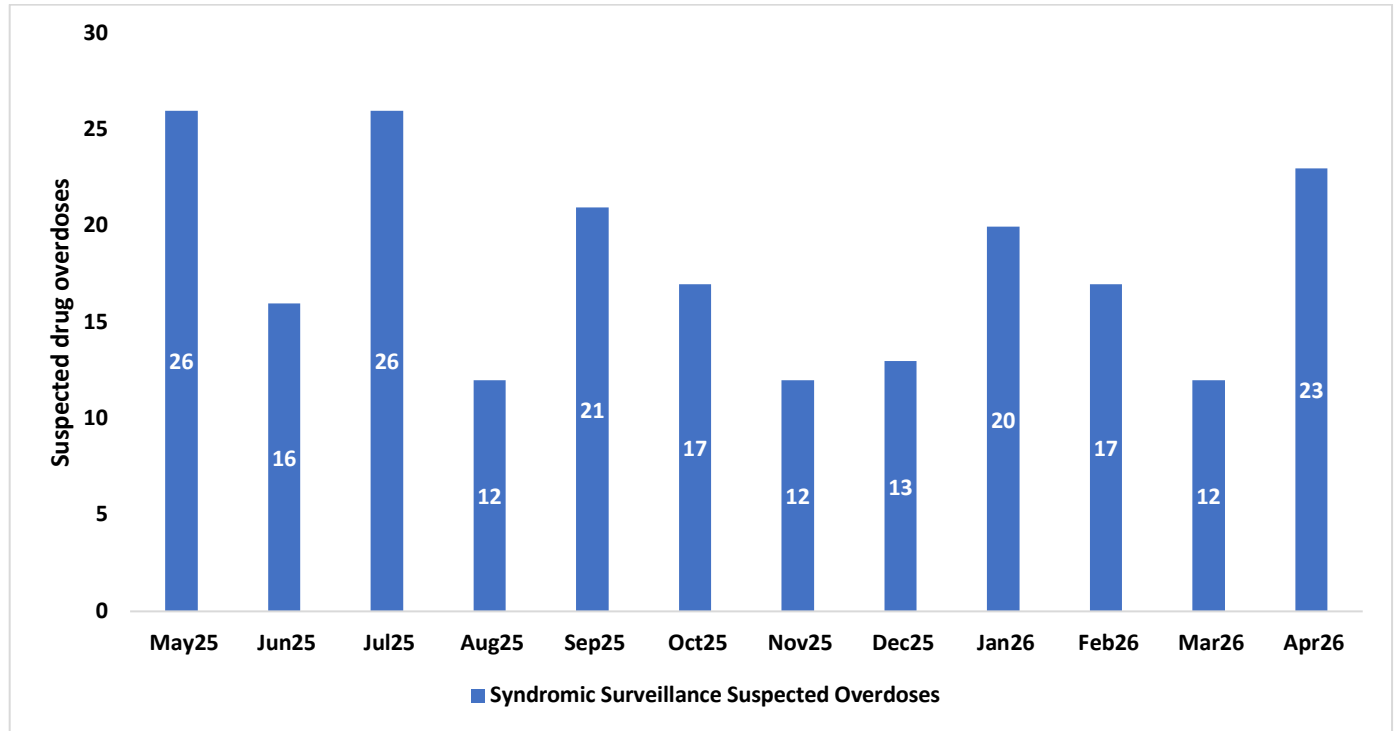

Figure 2. Monthly rates of suspected drug-related overdose ED visits in the Rural Region vs NV, past 12 months (per 10,000 population)

Figure 3. Monthly rates of suspected drug-related overdose ED visits in the Rural Region, 2019-2026 (per 10,000 population)

---

## TECHNICAL NOTES

Data Sources: National Syndromic Surveillance Program is a near real-time method of categorizing visits to the ED across Nevada based on a patient's chief complaint and/or discharge diagnosis.

Case definitions: For National Syndromic Surveillance Program, case definitions and queries for suspected all drug overdose ED visits are created and provided by CDC and include chief complaint keywords and ICD-10-CM discharge diagnosis codes.

Limitations: Statewide, the National Syndromic Surveillance Program is estimated to capture visits from approximately 90-95% of Nevada emergency department facilities, and thus may underestimate the occurrence of overdoses across the state. Since not everyone who overdoses is able to make it to the ED, this report may underestimate the total overdose burden in the state.
